

3. Please list one or more specific things your TA did well to help you learn biology.

**Text Response**

knew a lot about plants and also knew in-class material well enough to answer questions on it

Provided help outside of designated lab times.

She was always available for questions and very willing to do office hours for anyone that needed help.

Enthusiastic and friendly, never hesitates to help

She just always clarified any questions I had about class

She was always available outside of class and would explain a concept in a different way if someone did not understand it, which was incredibly helpful for that person and everyone else in that it reinforced their understanding of a concept

Rose was super nice and really great at explaining concepts!

Rose was always available, either before, after or outside of lab to answer any questions, and was very good about making sure we connected what we learned in lecture to the lab so that you actually felt like the lab was strengthening your understanding of concepts from lecture rather than just busy work.

Rose was very engaged, and always well prepared for the lab exercises.

Extremely accessible outside class for help with material.

She was always available to answer questions and explained thoroughly

She was always accessible via email or office hours to answer all of my questions, and she did a great job with summarizing the main takeaway points. .

Explain confusing topics

Rose was very enthusiastic about the course and always well prepared with the material.

She always helped me figure out how to get to the right answer rather than just telling me what the answer was.

Rose often paused the lab at specific points to talk to each group to make sure they understood the concepts behind the exercise we were performing. This gave us opportunities to ask questions for clarification.

She made herself available outside of lab and outside of her office hours to answer questions.

4. Please list one or more specific things your TA could improve upon to better help you learn biology.

**Text Response**

at least a little bit of walking through some of the labs, because if we got stuck in a pair it would have helped to just see a step done in front of the class

Presentation of material could sometimes get long, but it was always very informational so not really a bad thing.

Rose is great. I truly can't think of anything she could do better.

Try to prevent stalls in discussions

I do not think she needs to improve on anything

Give us more prompts to figure out some answers ourselves (especially during class discussions), though I understand that she usually does this in the interest of time.

She could perhaps be a bit better at integrating lecture material.

Better examples

I think that Rose did a great job, but if the labs had been more useful it would have helped.

Maybe rather than just explaining concepts orally, she could use a more hands on method that would help the visual and tactile learners rather than just the auditory ones.

Labs sometimes feel rushed, although that may have more to do with the amount of material in each lab.

Sometimes I felt she had difficulty rephrasing things to make them more understandable. Sometimes I would ask a question and be more confused afterward.

5. Further comments about your TA:

Text Response	
Rose did a great job and was a helpful TA!	
Rose is an extremely approachable and helpful TA, who is always willing to help us with any questions we have. She also makes a great effort of linking in her personal research into our class' content, which I appreciate!	
n/a	
Sometimes she seemed nervous, but overall she was a great TA that very obviously loved what she was teaching! Especially when it came to plants!
